Product approval presentation • October 2026

WHY THIS PRODUCT

Learning works better when it feels like play

FunBerry gives children a world they want to revisit while keeping the important decisions in a grown-up space.

★

Joy first

Colourful zones, short games and friendly rewards invite exploration.

↗

Progress that matters

Skills and play history help families see where curiosity is growing.

✓

Grown-up control

Children play through profiles; account and privacy controls stay with adults.

EVERY USER POINT OF VIEW

Designed for a family, not one generic user

Each person gets the right level of control, language and complexity.

G

Visiting grown-up

“Is this right for my family?”

A clear welcome, product promise, sign-in and free account path.

P

Parent or guardian

“Set it up and keep it safe.”

Dashboard, child profiles, PINs, progress, settings, export and deletion.

C

Child player

“Let me pick and play!”

Friendly profile picker, themed zones, games, tickets and rewards.

F

Returning family

“Continue without confusion.”

Remembered account, fast child selection and persistent progress.

FAMILY JOURNEY

The adult sets the stage. The child explores.

The hand-off between grown-up and child is visible, simple and intentionally separated.

Adult account	Child profiles	Child picker	Learning zones	Games and tickets	Rewards + progress

ONE ADULT ACCOUNT CAN SUPPORT MULTIPLE CHILDREN WITH SEPARATE PROGRESS

GROWN-UP EXPERIENCE

The family control centre

Parents can create the right play setup, understand progress and retain control of family data.

P Parent dashboard

- Family overview at a glance
- Choose who is playing
- Return to grown-up controls

+ Child profiles

- Create, update and remove children
- Names and age-appropriate setup
- Optional child PIN protection

↗ Progress

- Per-child activity view
- Learning progress and rewards
- Read-only plan visibility

S Account controls

- Password recovery
- Data export and deletion
- Privacy and legal destinations

CHILD EXPERIENCE

A playful world with clear choices

Large controls, friendly copy and a vivid reward loop help children act independently without exposing adult account settings.

Pick a profile

- Recognisable child names
- Simple profile hand-off
- PIN-aware entry when enabled

Explore zones

- Themed learning destinations
- Age-friendly visual navigation
- Short, purposeful activities

Play games

- Native simple-game experiences
- Ticketed complex-game access
- Controlled game web content

Earn rewards

- Tickets and completion feedback
- Persistent per-child progress
- Positive, non-competitive cues

KIDS AND FAMILY SAFETY

Fun on the surface. Guardrails underneath.

The product avoids pretending that child safety is one switch; it is built from account separation, constrained navigation and adult control.

A Adult authority

- Grown-up owns the account
- Child profiles are subordinate
- Sensitive controls remain adult-facing

W Controlled web content

- Only ticketed game routes open
- Unexpected navigation is blocked
- External URLs leave the app safely

D Data control

- Export request path
- Account deletion path
- Explicit privacy and legal links

R Responsible design

- No ads or invented social features
- No open chat or stranger contact
- Read-only plan presentation

MOBILE ARCHITECTURE

A native family shell with controlled game reuse

Core family journeys remain native; selected complex games reuse existing content through a tightly constrained bridge.

Android + iOS

One React Native product with branded platform packaging and icons.

Native family shell

Auth, dashboard, profiles, picker, zones, rewards, progress and settings.

Ticketed game WebView

Only authorised complex-game routes run inside the controlled web surface.

Existing services

Accounts, child state, game tickets, rewards and progress APIs.

NATIVE: FAMILY CONTROLS + SIMPLE GAMES

WEBVIEW: AUTHORISED COMPLEX GAMES

GUARDRAILS: TICKET + ALLOWLIST + EXIT

QUALITY EVIDENCE

Verified like a product, not a mock-up

The release path covers the app, its APIs and the database change needed by ticketed play.

2
platform targets

API 36
Android emulator verification

Hermes
iOS JavaScript export

LIVE
game-ticket migration deployed

- ✓ Release APK built and installed
- ✓ Worker deployment verified healthy
- ✓ Family and child flows exercised
- ✓ Tests and release documentation included

STORE READINESS

Prepared for owner-led store submission

The product is not yet store-approved. Credentials, signed iOS testing and store declarations remain controlled owner steps.

READY NOW

- ✓ Branded icon, launch and family experience
- ✓ Android release build and device verification
- ✓ iOS export verification and native project
- ✓ Export, deletion, privacy and legal entry points
- ✓ Architecture, migration and release documentation

BEFORE PUBLIC LISTING

1. Provide Apple signing and App Store Connect access
2. Provide Google Play Console access and signing
3. Complete full signed iOS build and device test
4. Complete Kids/family store policy declarations
5. Capture listing media and submit for review

WHY APPROVE

A family product with a memorable heart

FunBerry is designed to delight children without asking grown-ups to surrender clarity or control.

Children want to return

The Berry identity, zones and reward loop create a recognisable world.

Grown-ups stay informed

Profiles, progress and account controls make family use understandable.

The platform can grow

Native and ticketed-game paths support a broader learning catalogue.

APPROVAL DECISION

Approve a safer, smarter kind of play

The product experience, family model and technical foundation are ready. Owner-controlled signing and store operations are the final gates.

01

Approve the family experience

02

Release store credentials and assets

03

Run final signed builds and submit
